达尔文时刻之熵

The Entropy of Darwin's Moment

Xia Mai

若你想发现宇宙的奥秘，请以能量、频率与振动的方式思考。
If you wish to uncover the mysteries of the universe, think in terms of energy, frequency, and vibration.

这句话出自我的精神导师特斯拉，也是我一生的信条。
This quote comes from my spiritual mentor, Tesla, and it has been my lifelong creed.

你们最熟知我的，大约是我在圣塔菲研究所发表论文《再论人类不平等的起源》，以及那本畅销著作《人类的潜能》。
What you probably know me best for is my paper "A Re-examination of the Origins of Human Inequality" published at the Santa Fe Institute, and the bestselling book "Human Potential."

是的，我认为能量的真相可以改变社会结构的正义。
Yes, I believe the truth about energy can transform the justice of social structures.

虽然人们说，发明者对于自己的创造物并不能负有百分之百的责任，正如爱因斯坦无法阻止人类发明核武器，但我还是为自己在那一奇异点所扮演的角色感到不安，因为这两周大规模爆发的脑控入侵事件，正是这奇异点带来的众多副产品中的一个。
Although people say that inventors cannot bear one hundred percent responsibility for their creations, just as Einstein could not stop humans from inventing nuclear weapons, I still feel uneasy about the role I played at that singularity, because the large-scale outbreak of brain-control intrusion events in these past two weeks is precisely one of the many byproducts of that singularity.

为了承担那部分属于我的责任，我在星际公链上向地球所有公民，公开我多年前撰写的工程日志。
To assume the part of responsibility that is mine, I am making public on the interstellar public blockchain the engineering logs I wrote years ago to all citizens of Earth.

我必须这么做，因为植根于人性深处的自私，已经使人类在科技树上走了太多弯路，想想特斯拉发明的交流电在当年曾遭受的冷遇，便能明白这种因私心而违反自然规律的熵增现象。
I must do this, because the selfishness deeply rooted in human nature has led humanity down too many wrong turns on the technological tree. Just think of the cold

reception Tesla's alternating current received back then, and you can understand this phenomenon of increasing entropy, where selfishness violates the laws of nature.

在这样紧张的社会形势下，人类的时间不多了。
Under such tense social circumstances, humanity is running out of time.

我已把这封信备份至国际公链，现已动身前往瑞士的联合国人类科技安全局。
I have backed up this letter to the international public blockchain and have now set out for the United Nations Agency for Human Technology Safety in Switzerland.

在此信发布的四十八小时内，如若我再未在网络上回复信息，那么您听到任何关于我自杀或意外身亡的消息，都请一定不要相信，富临可（FullLink）公司和背后的跨国资本，大约不会让我活着抵达瑞士。
Within forty-eight hours of this letter's release, if I have not replied online, then no matter what news you hear about my suicide or accidental death, please do not believe it. FullLink Corporation and the multinational capital behind it will likely not allow me to reach Switzerland alive.

请为我祈祷吧，希望我可以像斯诺登一样幸运。
Please pray for me; I hope I can be as fortunate as Snowden.

DATE 4.1
DATE 4.1

这地儿可太偏了。
This place is way too remote.

在斯坦福参加招聘会的时候，可没人告诉我公司在冷战遗留的地下设施里。
When I was at the Stanford job fair, no one told me the company was located in a Cold War-era underground facility.

我们公司旁边，就是大名鼎鼎的桑福德实验室，据说为了研究暗物质，他们发明了某种高敏观测装置，可以观测到十分罕见的现象。
Right next to our company is the famous Sanford Laboratory. It is said that in order to study dark matter, they invented some kind of highly sensitive observation device capable of detecting extremely rare phenomena.

冷战之前，这儿是霍姆斯特克金矿，最深处有两千多米。
Before the Cold War, this was the Homestake Gold Mine, with a maximum depth of over two thousand meters.

每次一想到自己坐在一千多吨金子上办公，我就莫名有种飞黄腾达之感。
Whenever I think about how I'm working while sitting on over a thousand tons of gold, I inexplicably feel a sense of soaring success.

午休时间，难得出来晒晒太阳，按照我们家乡的说法，这样的环境让人阳气不足。
During my lunch break, I finally got a chance to come out and bask in the sun. According to the sayings from my hometown, such an environment makes one deficient in yang energy.

实验室出入口是以前的金矿隧道，从卫星地图向下看，花岗岩峰林褶皱把入口紧密包裹，一般人很难发现端倪。
The laboratory entrance is the former gold mine tunnel. Looking down from satellite maps, the folds of the granite peak forest tightly wrap around the entrance, making it hard for ordinary people to spot.

要不是富临可开出了两倍于行情的工资，我才不愿到这鸟不拉屎的地方工作。
If it weren't for FullLink offering double the market rate in salary, I would never be willing to work in this godforsaken place.

不过，我想大概也没有人比我更适合这份工作了吧，毕竟我可是计算机和神经科学的双博士。
However, I suppose no one is more suited for this job than I am, after all, I hold dual doctorates in computer science and neuroscience.

这份工作另一个好处是，附近毫无娱乐消费的去处，我对此并无遗憾，这大大有益于我的钱包。
Another advantage of this job is that there are absolutely no entertainment or spending spots nearby. I have no regrets about this; it greatly benefits my wallet.

DATE 4.2

入职培训时，我们几个新员工在总裁办公室见到了著名的爱德生，当时他正拿着一本看起来很古老的中世纪羊皮卷翻阅，见我们几个进门，他从眼镜上抬眼一扫，并没有起身。
During the orientation, a few of us new employees met the famous Edison in the CEO's office. He was flipping through what looked like a very ancient medieval parchment. When he saw us enter, he glanced up over his glasses but didn't get up.

人力总监安娜依次介绍了我们，似乎是注意到我的华人面孔，爱德生忽然摘下眼镜，问我，你的工作签办下来了吗？
HR Director Anna introduced us one by one. Seeming to notice my Chinese face, Edison suddenly took off his glasses and asked me, "Has your work visa been processed?"

我说，我高中就移民来硅州了。
I said, I immigrated to Silicon State in high school.

他并未回应，只是自顾自说，他给自己起了个中文名，叫曹操。
He didn't respond, just said to himself that he had given himself a Chinese name, Cao Cao.

我看见他桌面那一摞书中有本《阿特拉斯耸耸肩》，旁边的书居然是《上下五千年》。
I saw among the stack of books on his desk a copy of "Atlas Shrugged," and next to it was actually "Five Thousand Years of China."

这真是有趣，不知什么时候开始，国学的风吹到了这里。
This is really interesting. I don't know when it started, but the trend of Chinese traditional culture has blown into this place.

我向他推荐了一本《金花的秘密》。
I recommended to him a book, "The Secret of the Golden Flower."

他说他已经读过了，还问有没有更本土的推荐？
He said he had already read it, and asked if there were any more indigenous recommendations?

我说，诸子百家都应该看一看。
I said, you should take a look at the Hundred Schools of Thought.

他放下羊皮卷，问我叫什么。
He put down the parchment and asked me my name.

我说我叫李自诚，Chance Li。
I said my name is Li Zicheng, Chance Li.

他说，我喜欢你的名字，无论是中文的，还是英文的。
He said, I like your name, both the Chinese and the English versions.

和我同期入职的还有一个矮个子小胖，叫恰克。
Also joining the company around the same time as me was a short, chubby guy named Chuck.

出了办公室大门，他转过头来恨恨地捏了我一把，说，自诚，他记住你了，你这该死的崽种。
Out the office door, he turned around and gave me a fierce pinch, saying, "Zicheng, he remembers you, you damned bastard."

爱德生的成功是不需要解释的。
Edison's success needs no explanation.

他是董事长老马一手培育的高管，打工人的天花板。
He is a senior executive cultivated by Chairman Ma himself, the ceiling for any employee.

或许有一天，我也能坐上他的位置。
Maybe one day, I can also take his place.

DATE 4.5
DATE 4.5

机器建模后得到的交叉验证准确率，达不到 75%，这是问题的核心。
The cross-validation accuracy obtained after machine modeling does not reach 75%; this is the core of the problem.

我检查了所有的过程，从数据的预降噪、特征工程到机器学习，问题都不算太大，至于后期的控制指令和硬件工程，都属于工程范畴，只要时间足够都不成问题。
I checked all the processes, from data pre-denoising, feature engineering, to machine learning; none had major issues. As for the later control instructions and hardware engineering, they fall within the engineering domain and are not problems as long as there is enough time.

卡点出在数据源头。
The bottleneck lies at the data source.

我查看了公司目前使用的电极设备系统，嵌入式脑机在前期能够读取更精确的脑信号，但随着时间增加，实验者的脑熵显著降低，脑部活动的自适应性和复杂性受损，表现出刻板行为、认知僵化、信息处理效率下降的现象，这导致我们的实验无法持续，每隔数月就要换一批活体样本。
I looked at the electrode equipment system the company is currently using. The embedded brain-computer interface can read more precise brain signals in the early stage, but as time increases, the subject's brain entropy decreases significantly. The adaptability and complexity of brain activity are impaired, manifesting as stereotyped behavior, cognitive rigidity, and decreased information processing efficiency. This makes our experiments unsustainable; we have to replace the live subjects every few months.

我们需要在不破坏大脑复杂性与自适应功能的前提下，收集更多的脑部活动数据。
We need to collect more brain activity data without damaging the brain's complexity and adaptive functions.

而非侵入式数据，尽管不够准确，但不会损坏大脑功能，以时间换空间，或许是解决问题的关键。
Non-invasive data, although less accurate, does not damage brain function. Trading

time for space might be the key to solving the problem.

基于这一点，我尝试性地提出了非侵入式数据补全计划。
Based on this, I tentatively proposed a non-invasive data supplementation plan.

有了足够长时间的人脑活动大数据，我们可以训练出更稳定的多模态模型。
With large-scale brain activity data collected over a sufficiently long period, we can train more stable multimodal models.

还有更重要的一点是，相比较侵入式脑机，非侵入式脑机更能够被社会人群广泛接受，首先发布非侵入式设备，还立刻会为公司带来一笔现金流。
More importantly, compared to invasive brain-computer interfaces, non-invasive ones are more widely accepted by the general public. Releasing the non-invasive device first would immediately bring a cash flow to the company.

这一提案受到了爱德生的认可，他计划利用现有的合作关系，向大学、监狱与科技公司发放样机与手环。
This proposal was approved by Edison. He plans to use existing partnerships to distribute prototypes and wristbands to universities, prisons, and technology companies.

另，我发现公司频繁更换的这些实验人员，全部是无期徒刑的罪犯。
Additionally, I discovered that the experimental subjects the company frequently replaces are all criminals serving life sentences.

以往这类实验，多为残障人士自愿参与。
In the past, such experiments mostly involved voluntary participation from people with disabilities.

我问了我们信号编译部的小组长布林。
I asked our team leader in the Signal Compilation Department, Bullen.

他说，公司和州监狱签署了福利实验条款，每个参与实验的罪犯都能得到一大笔补偿金，许多被试者都是主动参与。
He said the company signed a welfare experiment clause with the state prison. Each criminal participating in the experiment receives a large sum of compensation, and many subjects volunteered.

而这，完全合法。
And this is completely legal.

DATE 4.19
DATE 4.19

没想到，才刚入职，我已连续加班两周。
Unexpectedly, having just joined the company, I've already been working overtime for two consecutive weeks.

非侵入设备与身心脑检测系统已初具雏形，但竞争对手显然比我们走得更快。
The non-invasive device and the mind-body-brain detection system have begun to take shape, but our competitors are clearly ahead of us.

昨晚，软科公司刚发布了全球首款非侵入式脑机。
Last night, SoftTech Corporation just released the world's first non-invasive brain-computer interface.

今早，爱德生当众便摔了杯子，那个印着五月花号图样的陶瓷杯在众人脚下碎了一地，其中一块碎片弹到了布林脸上，划出了一道浅浅的口子。
This morning, Edison publicly smashed his cup. The ceramic cup printed with the Mayflower pattern shattered at everyone's feet, and a fragment bounced onto Bullen's face, leaving a shallow cut.

爱德生说，这款产品绝对不可以流产，我们只有一个月窗口期。
Edison said, this product absolutely cannot fail; we only have a one-month window.

他已和老马汇报，今晚就提前宣发概念设计，一个月后就推出实物装置。
He has already reported to Ma, and tonight they will release the concept design ahead of schedule, launching the physical device in one month.

爱德生还宣布，六个小组，一百号人，每人每天都要提前半小时到实验室，挨个汇报个人工作进展。
Edison also announced that the six groups, a total of a hundred people, must arrive at the lab half an hour earlier each day and report their individual work progress one by one.

真他妈的离谱。
This is absolutely fucking insane.

出了大会议室，我和恰克陪小组长布林到医务室处理脸上的伤口。
Leaving the main conference room, Chuck and I accompanied team leader Bullen to the infirmary to treat the wound on his face.

医生给他擦酒精时，布林咬着牙说，老马给爱德华施压后，爱德华就会把压力甩给我们。
As the doctor applied alcohol to the wound, Bullen gritted his teeth and said, "After Ma puts pressure on Edison, Edison shifts the pressure onto us."

别看爱德生名声在外，他其实对生物科技一窍不通，全指望我们，因为不懂，所

以才得了狂犬病一样暴躁。
"Despite Edison's fame, he actually knows nothing about biotechnology. He relies entirely on us, and because he doesn't understand, he acts as irritable as a rabid dog."

我和恰克面面相觑，这家公司可是行业独角兽，没想到备受崇拜的曹操竟是个绣花枕头。
Chuck and I looked at each other. This company is a unicorn in the industry; I never expected the much-admired Cao Cao to be a pretty face with no substance.

本来每天加班赶研发进度，我们已经够累了，现在倒好，还要额外花半小时汇报前一天的工作，真怀疑他脑子被门夹了。
We were already exhausted from working overtime every day to push the R&D progress. Now, on top of that, we have to spend an extra half hour reporting on the previous day's work. I really suspect his brain got squeezed by a door.

前阵子在新闻里看到，新设立的政府效率部要求所有公职人员写日报评估绩效，我还暗自庆幸科学家能保守一点自由的尊严。
I saw in the news a while ago that the newly established Department of Government Efficiency required all public officials to write daily reports to evaluate performance. I secretly felt relieved that scientists could retain a bit of free dignity.

可这才几天，我们便沦陷了。
But just a few days later, we've also fallen.

如今看来，在这无处不在的阶层结构中，除了金字塔尖的人，其他人无论职业，并没有什么本质的不同。
Looking at it now, in this pervasive hierarchical structure, apart from those at the very top of the pyramid, there is no essential difference among others, regardless of their profession.

DATE 5.14
DATE 5.14

三倍加班费，三倍加班费，坚持不下去的时候，我就靠这句话自我安慰。
Triple overtime pay, triple overtime pay. When I feel like I can't hold on, I comfort myself with these words.

黑框眼镜也遮不住黑眼圈，谁加班到晚上十点不被掏空？
Even black-rimmed glasses can't hide the dark circles under my eyes. Who wouldn't feel drained after working overtime until ten at night?

问题是第二天一早，还要面对曹操那惨白的脸，真让人提不起精神。
The problem is having to face Cao Cao's pale face early the next morning; it really saps one's spirit.

好在原型机已经做出来，今天拿到样机的那一刻，什么都值了。
Fortunately, the prototype has been made. The moment I got my hands on the demo unit today, it was all worth it.

我们的非侵入式脑机由颈环和脑环两部分组成。
Our non-invasive brain-computer interface consists of two parts: a neckband and a headband.

颈环有两个功能，一是监测身心信号，如心率血压等基础数据和肌肉电信号等补充指标，另一个功能则是环境事件识别，通过颈部安装的隐私摄像头追踪用户活动，再通过空间智能识别真实事件。
The neckband has two functions. One is to monitor mind-body signals, such as basic data like heart rate and blood pressure, and supplementary indicators like electromyography signals. The other function is environmental event recognition, which tracks user activities through a privacy camera installed on the neck and then uses spatial intelligence to identify real-world events.

而脑环，则主要针对脑部，除了采集α、θ等脑波，还可以结合功能性近红外光谱，监测血流变化，从而识别活跃脑区。
The headband, meanwhile, is primarily for the brain. Besides collecting brainwaves like α and θ, it can also be combined with functional near-infrared spectroscopy to monitor blood flow changes and thus identify active brain regions.

这样双管齐下，不仅可以获得海量人类行为事件与身心脑数据，还可以把人体活动与脑部活动精密地对应起来。
This dual approach not only yields massive amounts of human behavioral event data and mind-body-brain data but also allows for precise correlation between human activities and brain activities.

真是天才的发明。
What a genius invention.

是谁这么天才呢？当然是我，哈哈哈。
Who is this genius? Of course it's me, hahaha.

不过，在发布之前，我们还需要一些启动数据，来获得一个相对合理的基准初始设置。
However, before launch, we need some initial data to obtain a reasonably sound baseline configuration.

来吧，都来做小白鼠吧！
Come on, everyone come be guinea pigs!

DATE 5.17
DATE 5.17

工期实在是太紧张了。
The schedule is just too tight.

一个月眼见着到期，初始程序还没做完。
The one-month deadline was approaching, and the initial programming still wasn't finished.

我们向曹操求情，在马老板的恩准下，额外获得了两周时间。
We pleaded with Cao Cao, and with Boss Ma's approval, we were granted an extra two weeks.

昨天，工业设计终于赶了出来，金属电路包裹上硅胶，便仿佛多了些麻痹碳基生物的温度。
Yesterday, the industrial design was finally rushed through. The metal circuits wrapped in silicone seemed to gain a kind of warmth that numbs carbon-based lifeforms.

我试了下，体感不错，脑环看起来像一根厚一些的运动发带，而颈环则做成了流线型项链，比样机时尚不少。
I tried it; it felt good. The headband looked like a slightly thicker sports headband, while the neckband was designed as a streamlined necklace, much more stylish than the prototype.

我戴了一整天，连睡觉也没有摘，下班前特地看了眼数据，从昨晚开始，我的所有睡眠均处于浅度状态，夜间醒了四次。
I wore it all day, even sleeping with it on. Before leaving work, I checked the data. Since last night, all my sleep had been light, and I woke up four times during the night.

今早八点半，或许是要跟曹操汇报，我的血压和β波急速升高，前额叶异常活跃，体温升高，肌肉高度紧张。
At 8:30 this morning, probably because I had to report to Cao Cao, my blood pressure and β waves surged rapidly. My prefrontal lobe was unusually active, my body temperature rose, and my muscles were highly tense.

进入工作状态后，β脑波持续主导，偶尔配合α脑波与θ脑波的释放，身体指标稍有好转，午休期间，短暂恢复到接近静息状态。
After entering the work state, β brainwaves remained dominant, occasionally interspersed with bursts of α and θ brainwaves. My physical indicators improved slightly, briefly returning close to a resting state during the lunch break.

下班时，我的综合状态数据攀升到一天内的最高峰，和我的感觉很一致。
By the end of the workday, my comprehensive status data peaked at its highest point of the day, consistent with how I felt.

不能等了，没时间了，必须立刻开始量产测试，尽早开始收集数据。
Can't wait, there's no time left. We must start mass production testing immediately and begin collecting data as soon as possible.

DATE 5.28
DATE 5.28

妈的，这帮吸血鬼，读博掉的头发都没这几天掉的多。
Damn it, these vampires. I didn't lose this much hair during my PhD as I have in these past few days.

如果我死在这，不知道他们会不会直接把我扔矿洞里。
If I die here, I wonder if they'll just throw me directly into the mine shaft.

好在，样机功能正常，我们动员了集团两百号人，测试了两周半，现在行为意图与身心脑信号的匹配度已上升到 85%，算是及格了。
Fortunately, the prototype functions normally. We mobilized two hundred people from the group for two and a half weeks of testing. Now the matching accuracy between behavioral intention and mind-body-brain signals has risen to 85%, which is considered passing.

现在不仅没有了脑退化问题，这组海量时空数据还能帮我们识别个体差异，从而大大提高脑波解码的准确率。
Now, not only have we eliminated the brain degeneration problem, this massive set of spatiotemporal data also helps us identify individual differences, thereby greatly improving the accuracy of brainwave decoding.

今天晚上，老马在万众瞩目下发布了这款产品，亲自演示了如何用意念力玩俄罗斯方块，尽管粉丝认为产品功能过于简单，戏谑声不断，我们还是顺利达成了收集数据的目标。
Tonight, Ma released the product under the spotlight, personally demonstrating how to play Tetris with the power of thought. Although fans thought the product's features were too simple, and there was a lot of teasing, we still successfully achieved our goal of data collection.

午夜，老马带着曹操在总裁办公室给我们开了香槟，这是我第一次看见活的老马，我是说，不是新闻或电视上的他。
At midnight, Ma, along with Cao Cao, opened champagne for us in the CEO's office. This was my first time seeing Ma alive—I mean, not him on the news or TV.

他勾着曹操的肩膀，一边拍他的背，一边说，你们这帮狗日的，真是本世纪最棒的天才，你们注定要见证历史。
He put his arm around Cao Cao's shoulder, patted his back, and said, "You motherfuckers are truly the greatest geniuses of this century. You are destined to witness history."

我看看同期入职的恰克，小胖子眼见成了大胖子，吹气球一样鼓起来，头发也稀疏不少。
I looked at Chuck, who joined the same time as me. The little chubby guy had visibly become a big fatty, swelling up like a balloon, and his hair had gotten much thinner.

曹操对布林耳语说，明天开始，可以对这帮新兵蛋子开放更多权限了。
Cao Cao whispered to Bullen, saying, "Starting tomorrow, we can grant these rookies more access."

DATE 6.17
DATE 6.17

首批四千位买家，两千位集团内部测试者，数据足够了。
The first batch of four thousand buyers and two thousand internal group testers provided enough data.

我天天泡在超算中心里。
I spend my days immersed in the supercomputing center.

虽然我们告诉消费者，数据采集使用了隐私计算，但他们都不知道的是，透过他们颈环上的全角摄像头，他们每天的日常，被藏在角落的我，看得一清二楚。
Although we tell consumers that privacy-preserving computation is used for data collection, what they don't know is that through the wide-angle cameras on their neckbands, I, hiding in a corner, can see their daily lives clearly.

老马不愿透露隐私，自然没有参与数据收集，可曹操没能躲过被我监视的命运。
Ma, unwilling to disclose his privacy, naturally did not participate in data collection, but Cao Cao couldn't escape my surveillance.

完全不出我所料，每天一到晨会，曹操的身心脑综合状态数据便开始上升，而我们的，便会陨石撞地球般地被砸出一个坑。
It was exactly as I expected. Every day at the morning meeting, Cao Cao's comprehensive mind-body-brain status data would start to rise, while ours would be cratered like a meteor hitting the earth.

不过他也有难受的时候，指标断崖下跌那次，是老马来公司考察，说是对开发进度很不满，甚至在社交网络上发了牢骚。
But he also had his moments of discomfort. The time his indicators plummeted off a

cliff was when Ma came to inspect the company, expressing great dissatisfaction with the development progress, even complaining on social media.

老马离开后，曹操立刻召集我们开动员大会，那是一个大规模的数据峰值偏移，蔚为壮观，我看着一个波谷从爱德生身上转移到小组所有人身上。
After Ma left, Cao Cao immediately convened a mobilization meeting for us. It was a massive shift in data peaks, spectacular to behold. I watched a trough transfer from Edison to everyone in the group.

都说压力会传染，这次我看见了它的具象化。
They say stress is contagious. This time, I saw it concretely manifested.

我的同事们好像都在这条能量链条上，除了一个人，辛迪。
My colleagues all seemed to be on this energy chain, except for one person, Cindy.

她是公司的财会，也是老马安插在公司里的眼线。
She is the company's accountant, and also the mole Ma planted in the company.

她的数据毫无波动，甚至还有些轻微的上浮，这是在幸灾乐祸吗？
Her data showed no fluctuation; in fact, it even rose slightly. Was she gloating?

果然，人际关系也是可视化的。
Sure enough, interpersonal relationships are also visible.

在人类的笨拙肉眼看不见的，能量与频率的世界中，或许也存在着某种食物链。
In the world of energy and frequency, invisible to clumsy human eyes, perhaps there also exists some kind of food chain.

我需要更多数据。
I need more data.

DATE 7.1
DATE 7.1

恰克更胖了。
Chuck got fatter.

他的身体像日趋混乱的代码，不停在错误的地方修修补补，综合指标也如大江东去，一路向下。
His body was like increasingly chaotic code, constantly patching up in the wrong places, and his comprehensive indicators, like the great river flowing east, went all the way down.

那个笑呵呵的安妮，每次低谷后却可以迅速恢复正常。

That cheerful Anne, after each slump, could quickly return to normal.

大部分人的数据，都在周期性地磨损与复原。
The data for most people showed periodic wear and recovery.

我灵机一动，忽然想到大卫·霍金斯关于人类意识能量层级的研究，于是悄悄用身心脑综合数据对参与这次实验的所有用户建了模，获得了他们的动态能量层级，同时偷偷用军方数据库权限，抓取了他们的社交网络结构。
An idea struck me. I suddenly remembered David R. Hawkins' research on the energy levels of human consciousness. So I secretly used the comprehensive mind-body-brain data to model all users participating in this experiment, obtaining their dynamic energy levels, and also used my military database access to surreptitiously grab their social network structures.

然后，我便发现，能量，具有"结构性"。
Then, I discovered that energy has a 'structural' nature.

一般而言，在等级森严的制度体系中，能量供给方长期处于食物链底层。
Generally speaking, in a rigidly hierarchical system, energy suppliers are chronically at the bottom of the food chain.

我推测，这种能量摄取是通过日常的行为规范实现的，比如，当我们违背心意去恭维一个人，或是无条件地听从差遣，都会导致能量的削弱，而处于权力结构顶端的人，却获得了源源不断的供养。
I hypothesize that this energy extraction is achieved through daily behavioral norms. For instance, when we go against our hearts to flatter someone, or obey orders unconditionally, it leads to a weakening of energy, while those at the top of the power structure receive a continuous supply.

这或许就是"权力的滋味"。
This might be the "taste of power."

但如果一个人不遵守这种约定俗成的规范，比如，内心不对强者产生倾慕，也不付出情绪价值，那么他的能量消耗便倾向于减少。
But if a person does not comply with these conventional norms—for example, if they don't feel admiration for the powerful nor provide emotional value—then their energy expenditure tends to decrease.

与之相对的，扁平型组织，如绿色组织、青色组织，成员能量则较为均衡，至少不存在明显的食宿现象。
In contrast, in flat organizations, such as green or teal organizations, member energy is more balanced, at least with no obvious phenomenon of parasitism.

在集团内的所有样本中，我注意到一个特例。

Among all the samples within the group, I noticed a special case.

一个叫汤姆的五十岁男性，从早到晚，始终有着非常好的数据指标，且波动极小，我猜想他大约是个高管。
A fifty-year-old man named Tom had consistently very good data indicators from morning to night, with minimal fluctuation. I guessed he was probably an executive.

我查看了他的日常影像，却意外地发现他是个在食堂装运垃圾的老头。
I looked at his daily footage and unexpectedly found he was an old man who hauled garbage in the cafeteria.

他的工作环境简陋，衣着破旧，脑波却可以持续处于α波与θ波中，这不禁让我想起武侠小说中的扫地僧。
His work environment was humble, his clothes worn, yet his brainwaves could continuously stay in α and θ states. This inevitably reminded me of the sweeping monk in martial arts novels.

我不能确定，体力劳动相较于脑力劳动，是否更有益于身体健康，但我认为，虽然他身处较低阶层，但人际关系简单，更为重要的是，他可以使自己一直安住在专注与无思当中。
I can't be sure if physical labor is more beneficial to physical health than mental labor, but I believe that although he is in a lower social stratum, his interpersonal relationships are simple, and more importantly, he can consistently abide in focus and non-thinking.

所以，我猜想社会结构并不能够完全决定能量走向，只要持续性地处于心流状态，人也可以罔顾外界而抵达平静。
So I hypothesize that social structure does not entirely determine energy flow. As long as one is continuously in a state of flow, one can also achieve tranquility regardless of the external environment.

或许我注定要通过这份工作来发现这个结论。
Perhaps I was destined to discover this conclusion through this job.

DATE 7.22
DATE 7.22

由于数据的充分完备，未曾涉足过生物社会学的我，偷偷加了三个星期的班，统计了出人类社会的能量流动数据。
Thanks to the abundance of data, I, who had never ventured into biosociology, secretly worked three extra weeks of overtime to compile the energy flow data of human society.

基于社交网络分析及能量耗散模型，我得到了三条人体能量定律。

Based on social network analysis and an energy dissipation model, I derived three laws of human energy.

1. 个体的社会阶层在一定程度上影响着其能量等级。
1. An individual's social stratum influences their energy level to a certain extent.

2. 个体的社交网络结构影响了其能量耗散的方式。
2. An individual's social network structure affects the way their energy dissipates.

3. 个体意识可以在一定程度上调节能量水平及耗散方式。
3. Individual consciousness can regulate energy levels and dissipation patterns to a certain extent.

毋庸置疑，这个发现意义重大，虽然我还来不及进行更深入的思考，但我很肯定，这一实证结果和卢梭的学说有显著的继承关系。
Undoubtedly, this discovery is of great significance. Although I haven't had time to think more deeply, I am quite certain that this empirical result has a significant inheritance relationship with Rousseau's theory.

人原本自由而平等，之所以形成了不平等社会，是由于私有制和权力。
Humans are originally free and equal; inequality in society arises from private property and power.

而我的发现进一步作了补充，这种不平等不仅存于权力中，同样反映在能量水平中，换句话来说，位置影响能量表达，对能量表达的影响又进一步束缚了生存空间。
My discovery further supplements this: this inequality exists not only in power but also manifests in energy levels. In other words, position affects energy expression, and the effect on energy expression further constrains the space for existence.

这种体量的数据，放在十八世纪的启蒙时代，是人们想都不敢想的。
Data of this magnitude was unimaginable to people in the eighteenth-century Age of Enlightenment.

卢梭的思想来源于人类的理性精神，而我的发现来自数据与算力，这或许正是理性精神在三百年后的延伸。
Rousseau's ideas originated from human rational spirit, while my discovery comes from data and computing power. This might precisely be the extension of that rational spirit three hundred years later.

如果能持续获得整个社会的身心脑数据，或许我们可以推导出矛盾引发革命的奇点，主动寻求改变以避免大规模动乱发生。
If we could continuously obtain mind-body-brain data for the entire society, perhaps we could derive the singularity where contradictions trigger revolution, and

proactively seek change to avoid large-scale upheaval.

又或许，这意味着存在一个最理想的社会结构，使得社会能以功利主义的方式最大化能量水平。
Or perhaps, this implies there exists an ideal social structure that maximizes the energy level of society in a utilitarian manner.

但我无法证实，社会结构与能量水平之间，是真的存在某种因果关系，还是只是某种耦合的涌现。
But I cannot confirm whether there truly exists a causal relationship between social structure and energy level, or if it is just some kind of emergent coupling.

要回答这一问题，势必要追溯到更本质的经验哲学。
To answer this question, it would be necessary to trace back to a more fundamental empirical philosophy.

但我有些累了，不想再继续。
But I am somewhat tired and don't want to continue.

怎样快速恢复能量，才是我现在最关心的话题。
How to quickly recover energy is the topic that concerns me most right now.

DATE 8.6
DATE 8.6

能量可以跃迁，能量可以共振，能量不做评判。
Energy can transition, energy can resonate, energy does not judge.

这一周，每天下班之后，我都会进行一小时冥想。
This week, after work each day, I meditate for an hour.

就是把大脑关机，不再想工作，也不再想"我"。
It's about turning off the brain, no longer thinking about work, no longer thinking about "I."

这是一种被反复实证过的疗愈之道，也是神经系统的清洗。
This is a healing path repeatedly proven by practice; it is also a cleansing of the nervous system.

当思想不再占据身体，意识进入止息，一片亮光，带我遁入空无。
When thoughts no longer occupy the body, and consciousness comes to rest, a bright light leads me into emptiness.

"堕肢体，黜聪明，离形去知，同于大通。"

"Cast off the limbs, dismiss perception, detach from form and abandon knowledge, and unite with the Great Thoroughfare."

从光中出来，我忽然想起小时候父亲常说起一句话，这句话出自司马承祯的《坐忘论》，据说是打坐的要诀，或许和冥想从本质上是一码事。
Emerging from the light, I suddenly remembered a phrase my father often said when I was young. It comes from Sima Chengzhen's "Treatise on Sitting and Forgetting," said to be the key to sitting meditation. Perhaps it is essentially the same as meditation.

我平静地冥想了两周，下班回家，视频也不看，游戏也不打，只是放空。
I meditated peacefully for two weeks. After work, I went home, watched no videos, played no games, just emptied my mind.

后来，再面对曹操训话时，我已波澜不惊。
Later, when facing Cao Cao's speeches again, I was already unfazed.

这些改变在身心脑数据上也有反应，我不仅不再受环境影响，甚至在缓慢地提升状态基本面。
These changes also reflected in my mind-body-brain data. Not only was I no longer affected by the environment, but I was even slowly improving my baseline state.

看来，只要心境稳住，便可以夺回能量的话语权。
It seems that as long as one's state of mind is stable, one can reclaim the authority over energy.

我实在没忍住，把这个发现告诉了恰克。
I really couldn't help it and told Chuck about this discovery.

他说，这个不稀奇，这种状态他也体会过。
He said, this isn't unusual; he has also experienced this state.

他还说，在这个状态里可以进行一种显化活动，manifest，意思就是通过对齐宇宙频率进入充盈状态，只要进入这个状态再许愿，就很容易梦想成真。
He also said that in this state, one can engage in a kind of manifestation activity, "manifest," which means aligning with the frequency of the universe to enter a state of abundance. Once in this state, if you make a wish, it's easy for your dreams to come true.

他还说，他特别想试试看，不节食不运动，能不能单靠许愿瘦下去。
He also said he really wanted to try if he could lose weight solely by making wishes, without dieting or exercising.

我说，单从神经可塑性而言，是会有所改变，但能改变多少，就得相信科学了。

I said, from the perspective of neuroplasticity alone, there will be some change, but how much change, you have to rely on science.

说完，我忽然想到这"显化"理论，又何尝不是西方的"封建迷信"。
After saying this, I suddenly thought, isn't this "manifestation" theory also a form of Western "feudal superstition"?

我把这个想法告诉恰克，又拍拍他的大肥屁股，他像被我戳中痛点一般，伸出比我粗两倍的胳膊，捉小鸡似地把我锁了喉。
I told Chuck this idea and patted his big fat butt. As if I had hit a sore spot, he extended his arms, twice as thick as mine, and put me in a headlock as if catching a chick.

我笑着挣开他，他用胖手扯了扯我的头发，说，人类啊，其实感知能力都差不多。
I laughed and broke free from him. He tugged at my hair with his chubby hand and said, "Humans, our perceptual abilities are actually all quite similar."

不过你们不宣扬这些，你们不是还有句俗语，叫，科学技术是第一生产力？
"But you guys don't promote these things; don't you have a saying: 'Science and technology constitute the primary productive force'?"

DATE 8.29
DATE 8.29

一切顺利。
Everything is going smoothly.

身心脑模型日趋完善，时间序列自动更新，只要持续向前跑便能达到目标精度。
The mind-body-brain model is increasingly refined, with automatic updates in the time series. As long as we keep moving forward, we will achieve the target accuracy.

来不及喘气，新一轮技术浪潮已迅速袭来。
Before I could catch my breath, a new wave of technology rapidly emerged.

侵入式脑机的连接密度大幅提高，接口更加小面微创，电极中蚕丝蛋白等生物相容性材料的使用，减少了脑组织的机械损伤和免疫反应，这让我们又一次看到了侵入式脑机普及的可能性。
The connection density of invasive brain-computer interfaces has greatly increased, with smaller, minimally invasive interfaces. The use of biocompatible materials like silk fibroin in the electrodes reduces mechanical damage and immune responses in brain tissue, allowing us to once again see the potential for widespread use of invasive brain-computer interfaces.

在此基础上，我们同步开始设计身心脑模型专用芯片。

Based on this, we simultaneously began designing a chip dedicated to the mind-body-brain model.

这种芯片可以成倍提高解码速度，一旦投产，专利和生产线足以把公司送上纳斯达克，对此，我们都很期待。
This chip can exponentially increase decoding speed. Once put into production, the patents and production lines would be enough to take the company to NASDAQ. We are all looking forward to this.

今天是我入职以来第一次参与侵入式项目。
Today is my first time participating in an invasive project since joining the company.

我需要通过访谈采集受体感知，将现场实时数据与中继编译数据进行对比校准。
I need to collect the subject's perceptions through interviews, and compare and calibrate the on-site real-time data with the relay compilation data.

侵入式实验室在矿洞深处，我们需要在超算中心一侧的暗门处刷取权限，而后进入一个电梯，下行二十米左右，进入一处空旷的地下空间。
The invasive lab is deep inside the mine. We need to swipe for access at a hidden door on the side of the supercomputing center, then take an elevator down about twenty meters into a spacious underground area.

这儿阴暗潮湿，岩洞表面不时有水滴下来，地面空间被隔出多个功能区，尽头是一间手术室，两旁是受试者的集装箱式宿舍。
It is dark and damp here, with water occasionally dripping from the cave surface. The ground space is divided into multiple functional areas. At the end is an operating room, flanked by container-style dormitories for the subjects.

我观察的第一位试验者叫詹姆斯，抵达这里时，脑外科医生已对他进行开颅手术，电极分别植入到左右脑额叶，数据通过线路输入门旁的电脑设备，进一步连接着楼上的超算中心。
The first subject I observed was named James. By the time he arrived here, the neurosurgeon had already performed a craniotomy on him, implanting electrodes into the frontal lobes of both hemispheres. Data was transmitted via wires to the computer equipment by the door, which further connected to the supercomputing center upstairs.

隔着防弹玻璃窗，我看见半坐在床上的他。
Through the bulletproof glass window, I saw him half-sitting on the bed.

不用想，这健硕的身型，纹身的手臂，必定是重罪的囚徒。
No doubt, with this robust physique and tattooed arms, he must be a prisoner convicted of a serious crime.

翻看档案，果然，一级谋杀，二十五岁。
Looking at his file, indeed, first-degree murder, twenty-five years old.

见我过来，他用鼻子轻蔑地哼了下，声音透过扩音器传出来。
Seeing me approach, he let out a contemptuous snort, the sound transmitted through the speaker.

他问我，你也是来往我脑子塞刀片的吗？
He asked me, are you also here to shove blades into my brain?

我翻了翻门口的医疗记录，应该是还没过恢复期。
I flipped through the medical records at the door; he was likely still within the recovery period.

这位受体的体格，站起来比我高三个头。
This subject's physique, standing up, would be a head taller than me by three.

幸亏有层玻璃隔开我们。
Thank goodness there is a layer of glass separating us.

我说，我是来给你提供帮助的。
I said, I'm here to provide you with assistance.

你现在觉得如何？
How are you feeling right now?

他说，有些地方很痛。
He said, some places hurt a lot.

我说不上来。
I can't really describe it.

隔壁房间的那个老头被人抬出去了。他又说。
The old man in the next room was carried out, he added.

我说，他没死，只是出现了智力衰退。
I said, he didn't die, just experienced cognitive decline.

他的年龄本就不适合进行这类实验。
His age was simply unsuitable for this type of experiment.

他坐在椅子上，黝黑的面庞似是要消散在不够明亮的室内光里。
He sat on the chair, his dark face seeming to dissolve in the insufficiently bright indoor light.

我看着他不甘的表情，看着入狱原因一栏的"一级谋杀"四个字，想着他为什么会选择这个实验。
I looked at his unwilling expression, looked at the words "first-degree murder" in the reason for imprisonment column, and wondered why he chose this experiment.

似乎看懂了我的想法，他带着一种憎恨说，不是为了钱，谁愿意来这鬼地方？
As if understanding my thoughts, he said with a tone of hatred, "Who would be willing to come to this godforsaken place if it weren't for the money?"

我妹妹还在上小学，整个家全靠我在撑着。
My sister is still in elementary school; the whole family depends on me.

我那个上初中的弟弟，兼职做模特，被骗到一个岛上，叫一个老男人给强奸了，狗\养的。
My younger brother, who was in middle school, was working part-time as a model, got tricked into going to an island, and was raped by an old man. Son of a bitch.

皮条客还没宣判就死在了监狱里，可欺负我弟的那个人却毫发无损。
The pimp died in prison before sentencing, but the person who bullied my brother got away unharmed.

每次从新闻上看到他，我都觉得自己被人骑在头上拉屎。
Every time I see him on the news, I feel like he's shitting on my head.

我叹了口气。
I sighed.

他又问我他会不会死。
He then asked me if he would die.

我说，我没法打包票。
I said, I can't guarantee anything.

看到他失望的眼神，我又说，请你一定坚持下去，或许能走出这个地方，到那时，你就不再是一个囚犯，而是人类奇迹的见证者。
Seeing his disappointed expression, I added, please persevere; perhaps you can get out of this place. By then, you will no longer be a prisoner, but a witness to a human miracle.

从实验室出来，小组长布林跟我说，这一批试验的目的，是开发中继编译器，实现脑机通讯功能，在此基础上进行机械外骨骼强化，达成人机远程协同战斗的目标。
After coming out of the lab, team leader Bullen told me that the purpose of this batch

of experiments is to develop a relay compiler to achieve brain-computer communication functions, and based on this, enhance mechanical exoskeletons to achieve the goal of human-machine remote cooperative combat.

回到算力中心，我在军方数据库中查了相关资料，增强外骨骼武器已在研发中，但目前的试验结果是失败的，一位名士兵因脑电反馈过载，永久丧失了语言能力。
Back at the supercomputing center, I checked relevant materials in the military database. Enhanced exoskeleton weapons are already under development, but the current test results are failures. One soldier permanently lost his language ability due to EEG feedback overload.

我很担心我的受体无法挺过适应期。
I am very worried that my subjects won't survive the adaptation period.

DATE 9.7
DATE 9.7

基于先前的冥想经验，我提出了催眠增强实验，通过激活潜意识，引导受体表现出超常的人体机能，这或许能够帮助詹姆斯进行神经自适应。
Based on my previous meditation experience, I proposed a hypnotic enhancement experiment. By activating the subconscious, guiding subjects to exhibit extraordinary human abilities, this might help James achieve neural adaptation.

作为我的 1 号受体，詹姆斯接受了适应性催眠，三个周期后，脑退化的倾向得到了明显缓解。
As my subject number one, James underwent adaptive hypnosis. After three cycles, the tendency toward brain degeneration was significantly alleviated.

那天我和詹姆斯对话，他说他过得十分煎熬，夜深人静的时候，当我们离开实验室，他总是害怕，不知道自己能不能活到明天。
That day I spoke with James. He said he was having a very hard time. In the dead of night, after we left the lab, he was always afraid, not knowing if he would live to see the next day.

我告诉他，用中国的老话说，人生如梦，朝生夕死，蜉蝣一般。
I told him, in an old Chinese saying, Life is like a dream, born at dawn, dying at dusk, like a mayfly.

如果想从心灵的煎熬中解脱，或许可以从观察头脑中的每一丝意念开始。
If you want to be freed from the torment of the mind, perhaps you can start by observing every thought in your head.

如果你能做到念念分明，不再一团混乱，或许你可以抵达无有恐怖，无颠倒梦想，究竟涅槃的境界。

If you can achieve mindfulness of each thought, no longer in a state of chaos, perhaps you can reach the state of no fear, no deluded dreams, and ultimate nirvana.

我用似是而非的英语表达着，他似懂非懂地点点头。
I expressed this in plausible English; he nodded as if understanding.

接下来，是我的 2 号受体，路易，二十一岁。
Next is my subject number two, Louis, twenty-one years old.

我看了看资料，也是个无期囚犯。
I looked at his file; he was also serving a life sentence.

这位白人小伙子非同一般，他和我一样，是藤校的学生，只是在大庭广众之下，当街枪杀了一位华尔街银行高管。
This young white man was unusual. Like me, he was an Ivy League student, except he shot and killed a Wall Street bank executive in broad daylight on the street.

当法官质问他为什么犯下一级谋杀，他说，这帮人是联邦国的蛀虫，他们的巧取豪夺正把经济拉向崩溃的边缘。
When the judge asked him why he committed first-degree murder, he said, "These people are the parasites of the Federated States; their plundering is driving the economy to the brink of collapse."

同他们的罪行相比，他犯下的谋杀不值一提。
Compared to their crimes, the murder he committed is insignificant.

在我对他例行问答测试时，他总是安静又克制，反应简短又精准。
During my routine Q&A tests with him, he was always quiet and restrained, his responses brief and precise.

我尝试着从他口中套出更多的话，比如他的家庭，他的个人喜好，可他只是微笑地看着我。
I tried to get more words out of him, like about his family, his personal preferences, but he just smiled at me.

有一次，当我问他是否也像隔壁的詹姆斯一样，为了钱参与这个项目时，他开了口。
Once, when I asked him if he also participated in this project for the money, like James next door, he spoke.

这个世界的痛苦无处不在，只有脱离这个物质世界，拥有意识自由，才是真正的自由。他说。
The pain of this world is everywhere. Only by leaving this material world and having freedom of consciousness can one achieve true freedom, he said.

没想到这位小伙是个哲学咖。
I didn't expect this young man to be a philosophy buff.

我给他安排了适应性催眠与冥想训练，或许能够帮助他更好地获得解脱。
I arranged adaptive hypnosis and meditation training for him, which might help him achieve liberation more effectively.

DATE 9.9
DATE 9.9

詹姆斯和路易的脑部状态在植入后均保持在良好水平。
James and Louis's brain states remained at good levels after implantation.

我想这得益于微型创面，或许定期催眠也助益不少。
I think this is due to the minimal trauma; perhaps the regular hypnosis also helped significantly.

好几次我去实验室时，詹姆斯和路易都坐在隔间里冥想，或许他们真的借由这种精神手段，脱离了这地狱般的处境。
Several times when I went to the lab, James and Louis were sitting in their compartments meditating. Perhaps they truly used this mental method to escape this hellish situation.

单从数据来看，路易进入冥想的时间要更长，我想或许是高等教育使他更具备专注能力。
Just looking at the data, Louis spent longer in meditation. I think maybe higher education gave him better concentration skills.

在冥想中，两人的左脑活动都显著减弱。
During meditation, the left-brain activity of both significantly decreased.

今日的数据尤为奇怪，路易自从醒来后，便几乎没有发生左脑活动，相反地，他的右脑极度活跃。
Today's data was particularly strange. Since waking up, Louis had almost no left-brain activity; conversely, his right brain was extremely active.

我去实验室查验这一情况。
I went to the lab to check this situation.

他好像知道我会来，已经在床边坐着等我，整个人散发着平和的光，和这简陋潮湿的环境格格不入。
He seemed to know I was coming; he was already sitting on the edge of the bed waiting for me. He exuded a peaceful light, completely out of place in this simple,

damp environment.

我说，能不能给我描绘一下你现在的感受？
I said, could you describe how you're feeling right now?

他说，我从未感觉如此幸福过。
He said, I have never felt so happy.

那是一种怎样的幸福，你可以具体描述一下吗？我问。
What kind of happiness is that? Can you describe it specifically? I asked.

他说，前天，我坐在这冥想，忽然间，世界静止了，一股白光充斥了这个房间，我突然听不见外界的声音了。
He said, the day before yesterday, I was sitting here meditating. Suddenly, the world stood still. A white light filled this room. I suddenly couldn't hear any outside sounds.

但我却能感觉到自己的每一个细胞，每一次心跳，我甚至可以和身体对话。
But I could feel every single cell of mine, every heartbeat. I could even have a conversation with my body.

虚室生白！
The empty room gives birth to light!

我心里暗想，他为何可以这样快到达这个境界。
I thought to myself, how could he reach this state so quickly?

我继续问，这种幸福和你之前获得过的成功相比呢？
I continued asking, how does this happiness compare to the successes you achieved before?

这完全不同，他说，沉默了一会，继续说，如果能够早一点知道，人可以什么都不做，就能够获得幸福，我想我不会再追求以往那些知识与观念，甚至不会去上大学。
It's completely different, he said, pausing for a moment, then continued, if I had known earlier that a person can achieve happiness without doing anything, I think I would no longer pursue those past knowledge and concepts, I might not even have gone to university.

我愣了一下，继续问了几个问题，手心满是汗。
I was stunned for a moment, then continued asking a few more questions, my palms sweaty.

我不知道应该回复他什么。
I didn't know what to reply to him.

他如今的状态，很难将他和谋杀华尔街高管的杀人犯联系在一起。
His current state made it hard to associate him with the murderer who killed the Wall Street executive.

他的内心后悔吗，还是说，他也在面临激烈的煎熬？
Did he regret it in his heart, or was he also facing intense suffering?

在绝境中解脱，是否真应了那句老话，重罪如霜露呢。
Is liberation in desperate times truly like that old saying, a grave crime is like frost and dew?

DATE 9.19
DATE 9.19

今天上午，隔壁的桑福德实验室对整个矿洞发出警报，在地表一公里处侦测到脑波纠缠态。
This morning, the Sanford Laboratory next door issued an alert to the entire mine, detecting a brainwave entangled state one kilometer above the surface.

那时我正在地下观测詹姆斯与路易的数据，超算中心出现了奇异的脑波数据丢失。
At that time, I was underground observing James and Louis's data when the supercomputing center experienced a strange loss of brainwave data.

我短暂断开了受体数据与超算中心的链接，申请了系统检修，心想这或许是设备故障。
I briefly disconnected the subject data from the supercomputing center and requested a system check, thinking this might be a equipment malfunction.

下午我又去看望了他们，重启超算中心后，数据依然时有时无。
In the afternoon, I went to see them again. After restarting the supercomputing center, the data was still intermittent.

我进入詹姆斯的隔间，询问他是否感觉和平常不同。
I entered James's compartment and asked if he felt any different than usual.

詹姆斯说，中午的时候，隔壁那位兄弟似乎来找过我。
James said, at noon, the brother next door seemed to have come to see me.

找你？我看了看眼前的防弹门，摇摇头。
Came to see you? I looked at the bulletproof door in front of me and shook my head.

这怎么可能？没有医护人员的权限，你们压根出不去，甚至连我都无法打开这扇门。

How is that possible? Without medical staff clearance, you can't get out at all, and even I can't open this door.

不是，他说，是他的意识来找了我。
No, he said, it was his consciousness that came to me.

说出来你可能不信，我们还在一起聊了会天。
You might not believe this, but we even chatted for a while.

我立刻走向路易的房间，透过窗户上的扩音器问他，詹姆斯说你们中午聊天了？
I immediately walked to Louis's room and asked him through the speaker on the window, "James said you chatted at noon?"

路易笑了，说，他是不是有一个上中学的弟弟，和一个上小学的妹妹？
Louis smiled and said, "Does he have a younger brother in middle school and a younger sister in elementary school?"

我心里暗骂吃惊。
I was shocked inside.

要知道他们关在不同的小隔间，四周都是石壁，为防止受体疼痛喊叫，所有房间都进行了隔音处理，他们很难通过声音交流。
They were kept in separate compartments, surrounded by stone walls. To prevent the subjects from shouting in pain, all rooms were soundproofed. It would be very difficult for them to communicate through sound.

唯一连接他们的，就是侵入式实验室门边那台电脑，而上午我已断开了他们和这台电脑的链接。
The only thing connecting them was the computer by the invasive lab door, and I had disconnected their connection to that computer in the morning.

我又问，今天上午检测到的脑波纠缠态，难道也是你？
I asked again, was that brainwave entangled state detected this morning also you?

他笑了笑，伸了个懒腰，把手枕在脑袋后面，说，我今天飞出去了。
He smiled, stretched, put his hands behind his head, and said, "I flew out today."

这儿困不住我。
This place can't contain me.

我看到了太阳，还看到了外面的花岗岩峰林。
I saw the sun, and I also saw the granite peak forest outside.

他妈的，见鬼了。

Damn it, this is crazy.

我愣在那里半天说不出话。
I stood there stunned, unable to speak for a long time.

桑福德实验室检测到的脑波纠缠态，竟然是他的神经活动逸散吗，研究员们还以为是新型武器入侵。
The brainwave entangled state detected by Sanford Laboratory was actually his neural activity escaping? The researchers thought it was a new type of weapon intrusion.

不知道是否是催眠冥想亦或是开颅手术加速了这一进程，人竟可以跳过超算中心直接彼此交流。
I don't know if hypnosis, meditation, or the craniotomy accelerated this process, but humans can actually communicate directly with each other, bypassing the supercomputing center.

这放在志怪小说中倒还说得过去，当现实就这样赤裸裸摆在面前，经受多年科学训练的我，还是感觉天塌了一般。
This might be acceptable in a supernatural fantasy novel, but faced with this stark reality, even I, with years of scientific training, felt as if the sky was falling.

是这个世界疯了，还是我疯了？？？
Is this world crazy, or am I crazy?

DATE 9.25
DATE 9.25

沟通现象重复发生了三次。
The communication phenomenon recurred three times.

我检查了好几遍，没有占据算力，也没有中继编译过程，抽检唾液也没发现关键点位的基因变异。
I checked several times; there was no consumption of computing power, no relay compilation process, and spot checks of saliva revealed no genetic mutations at key sites.

我忽然想到，关于人体的特异功能，钱学森和李嗣涔早就做过研究。
I suddenly thought about the research on human extraordinary abilities conducted long ago by Qian Xuesen and Li Sitsen.

在《论人体科学与现代科技》中，他将"特异功能"定义为"人类运用意念对人体或物体进行控制"的现象。
In "On Human Science and Modern Technology," he defined "extraordinary abilities" as the phenomenon of "humans using intention to control the human body or objects."

而李嗣涔则因涉及"灵魂"更受争议，他认为意念力可能通过暗物质或量子纠缠传递。
Li Sitsen was more controversial for involving the "soul." He believed that intentional force might be transmitted through dark matter or quantum entanglement.

道教自古便有精神力的土壤，可如今远在大洋彼岸，也出现类似现象，我想这和侵入式开颅手术撇不了干系。
Taoism has provided fertile ground for spiritual power since ancient times, but now, far across the ocean, a similar phenomenon has appeared. I think this is inseparable from invasive craniotomy.

我又检索了大量开颅术的资料，早在七千年前，人类就在进行开颅"环锯术"了。
I also searched extensively for information on craniotomy. As early as seven thousand years ago, humans were performing "trepanation" on the skull.

古非洲萨满认为，颅骨钻孔是"灵魂进出的通道"，通过手术可驱除邪灵或增强通灵能力。
Ancient African shamans believed that drilling a hole in the skull was a "channel for the soul to enter and exit," and through surgery, they could expel evil spirits or enhance psychic abilities.

在非洲、南美、欧亚大陆等地的考古遗址中，人们都发现了带规则钻孔的头骨。
In archaeological sites across Africa, South America, and Eurasia, people have found skulls with regular drill holes.

可无法复现的内容，无法被称为科学。
But content that cannot be reproduced cannot be called science.

我必须立刻进行更多组试验。
I must immediately conduct more groups of experiments.

DATE 9.29
DATE 9.29

对照实验计划通过了侵入式项目组的会议。
The controlled experiment plan was approved in the invasive project group meeting.

但我并没有将詹姆斯与路易自发沟通的事说出来，只说需要更多对照组来测试中继编译器。
But I did not mention the spontaneous communication between James and Louis. I only said more control groups were needed to test the relay compiler.

实验室对新一批受体进行了手术，总共四位，编成两组。

The lab performed surgery on a new batch of subjects, a total of four, divided into two groups.

第 2 组，受体 3 号，查理，男，谋杀，34 岁；受体 4 号，吉尔，女，抢劫，36 岁。
Group 2: Subject number 3, Charlie, male, murder, 34 years old; Subject number 4, Gill, female, robbery, 36 years old.

第 3 组，受体 5 号，比利，男，纵火，28 岁；受体 6 号，薇安，女，多次强奸未成年，42 岁。
Group 3: Subject number 5, Billy, male, arson, 28 years old; Subject number 6, Vianne, female, repeated rape of minors, 42 years old.

目前四位受体的信号校准完成，表现良好。
Currently, the signal calibration for the four subjects is complete, and they are performing well.

查理与吉尔通过中继编译成功进行了沟通。
Charlie and Gill successfully communicated through the relay compiler.

但关闭超算中心链接后，尚未产生自主沟通现象。
But after disconnecting from the supercomputing center, they have not yet exhibited spontaneous communication.

比利与薇安的情况较为特殊。
The situation with Billy and Vianne is more special.

在首次链接时，我们便在他们的下丘脑、杏仁核等性反应区发现了颅内高潮现象。
During the initial connection, we discovered intracranial orgasm phenomena in their hypothalamus, amygdala, and other sexual response regions.

这一现象在切断脑机链接线路后，依然重复出现。
This phenomenon recurred even after disconnecting the brain-computer interface link.

看来，两人的确产生了某种链接。
It seems the two did indeed develop some kind of connection.

用老话说，这两位或许"有点缘分"。
In the old saying, these two perhaps "have a bit of fate."

詹姆斯与路易的自主沟通现象仍在继续。
The spontaneous communication phenomenon between James and Louis continues.

我对他们进行了访谈，这类沟通主要通过意念及画面传递信息。

I conducted interviews with them; this type of communication mainly transmits information through intention and images.

接下来，我为他们安排了催眠及冥想。
Next, I arranged hypnosis and meditation for them.

每晚，他们都会在房内静坐一小时以上。
Every night, they would sit quietly in their rooms for over an hour.

查理、吉尔与薇安表现良好。
Charlie, Gill, and Vianne are performing well.

只有比利，始终处于焦虑与躁动中。
Only Billy remains in a state of anxiety and agitation.

DATE 10.24
DATE 10.24

在第十六次通过中继编译沟通后，查理与吉尔开始能够预知到彼此的想法，这种现象在吉尔身上更为明显。
After the sixteenth communication through the relay compiler, Charlie and Gill began to be able to anticipate each other's thoughts, a phenomenon more evident in Gill.

她说，每次查理要聊什么，我好像都能猜出来。
She said, every time Charlie wants to talk about something, I seem to be able to guess it.

之前我跟他提起过，我有只猫寄养在姑姑家，今天中午他问我，你的猫还活着吗。
I mentioned to him before that I have a cat staying at my aunt's place. Today at noon, he asked me, "Is your cat still alive?"

我就知道他会这么问，这种灵感是在今天早上吃你们送来的牛奶麦片的时候出现的。
I knew he was going to ask that. This insight came this morning while I was eating the milk cereal you brought.

以上帝的名义，这次我没撒谎。
In the name of God, I'm not lying this time.

与第二组相比，第三组则遇上瓶颈。
Compared to Group 2, Group 3 encountered a bottleneck.

薇安的状态尚可，但比利的状态很糟。
Vianne's condition is acceptable, but Billy's is very bad.

在第十八次中继通讯后，他表现出明显的排异反应。
After the eighteenth relay communication, he showed obvious rejection reactions.

今日午后，他忽然痛苦地嘶喊，用手捶打门与墙壁，但超厚的隔音设备挡住了他的声音。
In the afternoon today, he suddenly began shouting in pain, pounding the door and walls with his hands, but the extremely thick soundproofing blocked his voice.

下午两点五十分，有同事从监视器发现异常，给他注射了镇定剂。
At 2:50 PM, a colleague noticed something unusual on the monitor and administered a sedative.

尽管我们再没让他和薇安进行通讯，但奇异的是，薇安的状态也受到了影响。
Even though we did not allow him to communicate with Vianne again, strangely, Vianne's condition was also affected.

DATE 10.31
DATE 10.31

今天是一个值得纪念的日子。
Today is a memorable day.

我们将比尔送回监狱，同时，第四组受体就位。
We sent Bill back to prison, and simultaneously, the fourth group of subjects arrived.

受体 7 号，莉莉丝，女，谋杀，28 岁。
Subject number 7, Lilith, female, murder, 28 years old.

受体 8 号，安琪拉，女，谋杀，32 岁。
Subject number 8, Angela, female, murder, 32 years old.

7 号受体莉莉丝连续杀害了三名抛弃她的男友，而 8 号受体安琪拉则因为遭受家暴，毒死了自己的丈夫。
Subject number 7, Lilith, killed three boyfriends who had abandoned her. Subject number 8, Angela, poisoned her husband because she suffered domestic violence.

这次，我们把催眠及冥想训练放在了术前。
This time, we placed the hypnosis and meditation training before the surgery.

出人意料的是，两人首次由设备链接后，当晚便产生了自主沟通现象。
Unexpectedly, after the two were first connected by the device, they exhibited spontaneous communication phenomena that very night.

这意味着，一些特定条件组合起来，的确有较大概率使人类开启直接沟通能力。
This means that a combination of certain specific conditions does indeed have a relatively high probability of enabling humans to activate direct communication abilities.

或许人类的意识本就是自由的，只是受缚于这具肉身，才产生了语言吧。
Perhaps human consciousness is originally free; it is only because of bondage to this physical body that language arose.

古代神话中的"绝地天通"，或许正是指人类这种自由沟通能力的丧失。
The "Severance of Heaven and Earth" in ancient mythology perhaps refers precisely to the loss of this free communication ability in humans.

我又想到，在三星堆的墓穴中，青铜器上都是没有文字的，而青铜立人的眼睛又向远方突起，这是否意味着某种沟通天地的能力？
I also thought about the Sanxingdui burial pits, where bronze artifacts bear no inscriptions, yet the eyes of the bronze standing figures protrude towards the distance. Does this imply some ability to communicate with heaven and earth?

相对论告诉我们，时空本就是一体的。
The theory of relativity tells us that space and time are originally one.

如果远古人类无需文字便可以自由沟通，那么文字的发明，或许就意味着意识与信息的凝结，每一个字，都对应着某种能量或是场域。
If ancient humans could communicate freely without writing, then the invention of writing perhaps signifies a condensation of consciousness and information, with each character corresponding to some kind of energy or field.

或许咒语，并不是什么神秘学，而是一种时空能量特征的便捷入口。
Perhaps incantations are not some kind of mysticism, but a convenient entry point to the characteristics of spatiotemporal energy.

这几天，我在军方数据库中搜索到一个十分久远的影像，在遥远的西藏，一群喇嘛通过乐器、经咒与意念，使一块大石从平地腾空到数十米高的山崖上。
These past few days, I found a very ancient video in the military database. In distant Tibet, a group of lamas used instruments, mantras, and intention to make a large stone levitate from the ground to a cliff dozens of meters high.

如果真如钱学森所推测，人类意念对齐物质频率能够影响现实世界，那么金字塔工整的建造是否也不再是谜？
If, as Qian Xuesen speculated, human intention aligning with material frequencies can affect the physical world, then is the precise construction of the pyramids no longer a mystery?

在我看来，它的结构更像是某种能量收发装置，只是法老凑巧葬在其中罢了。
In my view, its structure seems more like some kind of energy transceiver; the pharaoh was merely coincidentally buried inside.

只可惜，如今的我们，早已失去远古的记忆，被困在残缺的巴别塔中。
Unfortunately, we today have long lost the memories of antiquity, trapped in the broken Tower of Babel.

我倒很想像路易那样，在上班时逃到洞穴外面，在阳光下俯瞰花岗岩地貌。
I would really like to be like Louis, escaping the cave during work hours to overlook the granite landscape under the sun.

或许，失去沟通能力后，人们便学会了撒谎，学会了写字，同时也开启了操纵与欺骗。
Perhaps after losing the ability to communicate directly, people learned to lie, learned to write, and also embarked on manipulation and deception.

我们崇尚真善美，尽管这并不能帮助我们生存，这种向往是否也在缅怀早已失去的高等能力呢。
We advocate truth, goodness, and beauty, even though this does not help us survive. Does this yearning perhaps also serve as a remembrance of the higher abilities long lost?

如果人类可以一直用意识沟通，什么都无法被隐藏，大约连真善美的概念都将不复存在。
If humans could always communicate through consciousness, nothing could be hidden, and probably even the concepts of truth, goodness, and beauty would cease to exist.

我想那些惯于欺骗的人，大约无法找回这古老的能力了。
I think those accustomed to deception probably cannot recover this ancient ability.

他们只能将谎言内化成生存技能，永远沉沦在计谋的游戏里。
They can only internalize lies into survival skills, forever sinking into the game of scheming.

DATE 12.8
DATE 12.8

沟通能力的事，我没有告诉布林，甚至连恰克也没有透露。
I didn't tell Bullen about the communication ability, not even Chuck.

受体依然每天数次通过中继编译交流，我让大家暂时保守这个秘密。
The subjects still communicated through the relay compiler several times a day, and I

asked them to keep this secret for now.

他们都还这么年轻，一生都要在监禁中度过，这短暂的自由，我不想打扰。
They are still so young, spending their lives in confinement. I don't want to disturb this brief freedom.

在外骨骼武器测试中，他们已经可以开展中等复杂的脑机操作，我以为日子会就这样向前，直到路易的情况急转直下。
In the exoskeleton weapon tests, they could already perform moderately complex brain-computer operations. I thought things would just continue like this until Louis's condition took a sharp turn for the worse.

为了增加脑机操作的协调性，中继编译增加了情感平滑功能，而路易是首位实验者。
To increase coordination in brain-computer operations, the relay compiler added an emotion smoothing function. Louis was the first subject.

开启功能那天，他说觉得自己的大脑无法正常解读情绪，但实验并没有停止。
The day the function was activated, he said he felt his brain couldn't interpret emotions properly, but the experiment did not stop.

今天下午的例行访谈中，我发现他的自我觉知已急剧退化。
During the routine interview this afternoon, I found that his self-awareness had sharply deteriorated.

先前他还会时不时冒出一两句金句，可现在的他变得毫无温度，回答正确而冷酷，我看着他，像在看着一个机器人，已没了半分先前睿智超脱的影子。
Before, he would occasionally utter a gem of wisdom, but now he had become devoid of warmth, his answers correct but cold. Looking at him was like looking at a robot; there was no trace of his previous wise and detached self.

我查看了他的数据，脑熵急剧下降，脑活动范围明显缩小，这可不是什么好兆头。
I checked his data; his brain entropy had plummeted, and the range of brain activity had significantly narrowed. This was not a good sign.

我赶紧关掉了情感平滑功能，希望他能尽快恢复成原先的那个自己。
I immediately turned off the emotion smoothing function, hoping he could recover his former self as soon as possible.

DATE 1.25
DATE 1.25

路易已经消失了，尽管他还活着。
Louis has disappeared, even though he is still alive.

这段时间里，我们所有的康复训练，都只是证实了这种损伤的不可逆。
All our rehabilitation efforts during this time only confirmed the irreversibility of this damage.

他被送走时，眼神已完全黯淡下去，那种空洞的表情使我心碎。
When he was taken away, his eyes had completely dimmed. That hollow expression broke my heart.

第一次，我怀疑自己是否彻底做错了，因为我真的无法确定自己究竟在做些什么。
For the first time, I doubted whether I had done something completely wrong, because I truly couldn't determine what exactly I was doing.

曹操还是坚持把情感平滑功能应用在了第二组受体中，因为它虽严重影响认知，却可以增加外骨骼操作的精确性。
Cao Cao still insisted on applying the emotion smoothing function to the second group of subjects, because although it severely affects cognition, it increases the precision of exoskeleton operation.

只有詹姆斯和薇安逃过一劫，因为刚失去伙伴，考虑到纠缠态的影响，试验被中止。
Only James and Vianne were spared, because having just lost their partners, and considering the effects of the entangled state, the experiment on them was suspended.

果不其然，受体们相继出现脑退化现象，看数据，退化速度比档案里的前一批受体还快，这便是情感平滑功能的可怕之处。
Sure enough, the subjects began to exhibit brain degeneration one after another. Looking at the data, the degeneration rate was even faster than that of the previous batch in the files. This was the horror of the emotion smoothing function.

看他们一天天在我眼前失去意识，是一种凌迟般的折磨。
Watching them lose consciousness before my eyes day by day was a torture akin to slow slicing.

令我没有想到的是，没有接受情感平滑试验的莉莉丝和安琪拉也开始出现脑退化，看数据，甚至比技术改良之前那批更快。
What I didn't expect was that Lilith and Angela, who had not undergone the emotion smoothing experiment, also began to show brain degeneration. Looking at the data, it was even faster than the batch before the technical improvements.

这难道是觉醒之后，人体机能对植入科技更加不耐受？
Could it be that after awakening, human bodily functions become even more intolerant of implanted technology?

我无力寻根究底，因为我的意志已濒临崩溃。
I am powerless to get to the bottom of it, because my will is on the verge of collapse.

看他们行尸走肉一般坐地在床沿，进食、实验、睡觉，一片死寂的平静，真让人窒息。
Watching them sitting on the edge of the bed like zombies, eating, undergoing experiments, sleeping, in a dead silent calm, is truly suffocating.

我他妈的到底在干什么？
What the hell am I doing?

我原以为，聪明如我，一定有能力让事情往正确的方向发展，可现在看来，技术的改良，催眠冥想，都只是在延缓伤害的发生。
I originally thought that being as smart as I am, I would certainly have the ability to steer things in the right direction. But looking at it now, technical improvements, hypnosis, meditation—they only delay the occurrence of harm.

我决定把沟通能力觉醒的情况汇报给曹操。
I decided to report the situation of the awakening of communication ability to Cao Cao.

公司斥资数亿设计的脑机芯片已投产，在老马的设想中，这是商业版图中最核心的一环，也是日后上市最重要的筹码。
The brain-computer chip designed with an investment of hundreds of millions has already been put into production. In Ma's vision, this is the core part of the business landscape and the most important asset for going public in the future.

如果告诉公众，在某些条件下，人类会觉醒某种原始本能，自主通过脑波交流，而持续使用侵入式脑机却有受到操控以及脑退化的风险，那么，不仅脑机芯片的价值会受到影响，整个公司的存在都会遭到质疑。
If the public were told that under certain conditions, humans can awaken some primitive instinct and communicate autonomously through brainwaves, while the continuous use of invasive brain-computer interfaces carries risks of manipulation and brain degeneration, then not only would the value of the brain-computer chip be affected, but the very existence of the entire company would be questioned.

但我还是决定把真相说出来。
But I still decided to tell the truth.

我写了一份实验报告，将这小半年内所有受体的情况一五一十描述清楚。
I wrote an experimental report, describing in detail the conditions of all subjects over this past half year.

我不能冒着人道主义风险继续推进这项技术。

I cannot continue to advance this technology at the risk of humanitarian principles.

昨天，曹操看了我的报告，夸我做得好，让我回去继续思考如何改进。
Yesterday, Cao Cao read my report, praised me for doing well, and told me to go back and continue thinking about how to improve it.

然而今天一早，公司开大会时，曹操在给老马的汇报中宣称，我们的侵入式脑机已经成熟，未来，超算芯片结合地天一体化星链网络，将打造无处不在的脑机互联。
Yet early this morning, during the company-wide meeting, Cao Cao announced in his report to Ma that our invasive brain-computer interface is mature. In the future, the supercomputing chip combined with an integrated ground-space Starlink network will create ubiquitous brain-computer interconnectivity.

通过超算中心，人们可以从手机的束缚中解放出来，与世界上任何一个人进行信息沟通，而詹姆斯与薇安，就是最好的活体广告。
Through the supercomputing center, people can be liberated from the constraints of their phones and communicate information with anyone in the world. James and Vianne are the best living advertisements for this.

整场汇报，他只字未提我的报告。
Throughout the entire presentation, he did not mention my report once.

不仅如此，曹操还制定了一系列的后续商业计划，"脑控计划"。
Not only that, Cao Cao also formulated a series of subsequent business plans, the "Brain-Control Project."

隐藏植入情感平滑软件，可以增加受体服从性，通过培养超级大脑，可以直接将观念灌输到联网的其他大脑中，不仅可以用于消费营销，还可以用于政治选举。
Covertly implanting emotion smoothing software can increase subject compliance. By cultivating super-brains, concepts can be directly implanted into other networked brains. This could be used not only for consumer marketing but also for political elections.

老马对曹操的汇报十分满意，说他看见一个巨大的跨生态产业链正在诞生。
Ma was very satisfied with Cao Cao's report, saying he saw a huge cross-ecosystem industrial chain being born.

他还说，年底我们就敲钟上市。
He also said, by the end of the year, we will ring the bell for the IPO.

走之前，他看到了杵在人群边上的我，说，Chance Li，我看了你的报告，well done。
Before leaving, he saw me standing by the edge of the crowd and said, "Chance Li, I read your report, well done."

他又扫视了研发小组，说，未来，你们都会成为千万富翁，甚至亿万富豪。
He then scanned the R&D group and said, "In the future, all of you will become multimillionaires, even billionaires."

话音落下，我的手臂被恰克捏了一把，他兴奋得要跳起，可我却笑不出来。
As he finished, my arm was pinched by Chuck. He was so excited he looked like he was about to jump up, but I couldn't bring myself to smile.

DATE 2.7
DATE 2.7

时值中国春节，我请了一周假。
It was the Chinese Spring Festival; I took a week off.

脱离那个黑暗潮湿的矿洞，我本应如释重负，但不知为何，心中更加阴霾。
Leaving that dark, damp mine, I should have felt relieved, but for some reason, my heart felt even more clouded.

只身去到夏威夷，躺在沙滩上，半年昏天黑地的工作，像是沙尘暴一般糊在脑子里，偶尔睡着，就开始做噩梦，梦见人们都变成了僵尸。
I went alone to Hawaii, lying on the beach. Half a year of relentless work was stuck in my mind like a sandstorm. Occasionally when I fell asleep, I had nightmares, dreaming that people had turned into zombies.

科学家的工作是中性的，我持续地安慰自己。
A scientist's work is neutral, I kept telling myself.

换个角度看，能在短时间内做出这样的突破，已经很不容易。
Looking at it from another angle, achieving such a breakthrough in a short time is already remarkable.

我给母亲打了个电话，说年底就能拿到一大笔分红，到时候可以把助学贷款还了，再买一套自己的房子。
I called my mother and said that by the end of the year, I would get a large bonus; I could pay off the student loans and buy a house of my own.

母亲听了很开心，说咱们的苦日子终于熬出头了。
My mother was very happy and said our hard days were finally over.

我想把母亲接到夏威夷一起度假，可她说洗衣房每天客人都很多，走不开。
I wanted to bring my mother to Hawaii for a vacation, but she said the laundromat was busy with customers every day and she couldn't get away.

我知道，她只是心疼钱。
I knew she was just worried about spending money.

来硅州十多年了，两年高中，四年大学，六年硕博，母亲只是让我安心学习，只要掌握了最高精尖的科学技术，就一定能过上好日子。
I have been in Silicon State for over ten years: two years of high school, four years of college, six years for my master's and PhD. My mother just wanted me to focus on my studies, believing that if I mastered the most advanced science and technology, I would surely have a good life.

尽管我最感兴趣的学科是人文社科，可最终，我还是选择了最有前景的计算机与脑科学。
Although my favorite subjects were humanities and social sciences, I ended up choosing the most promising fields: computer science and neuroscience.

我又给国内的父亲打了个电话。
I also called my father back home.

父亲是哲学教授，退休多年，整日侍弄花草，不与外界往来。
My father is a professor of philosophy, retired for many years, spending his days tending to flowers and plants, with little contact with the outside world.

我只记得，他执教多年，却依然只是副教授，一心沉醉于儒释道，视俗世为修行路上的浮云。
I remember that he taught for many years but remained only an associate professor. He was deeply immersed in Confucianism, Buddhism, and Taoism, viewing the mundane world as fleeting clouds on the path of spiritual cultivation.

我们买不起房，全家人挤在一室一厅的宿舍里。
We couldn't afford a house; the whole family squeezed into a one-bedroom dormitory.

后来，母亲觉得窝囊，便和他离了婚，带着我投奔了国外的姨妈。
Later, my mother, feeling humiliated, divorced him and took me to seek refuge with my aunt abroad.

母亲说，这里遍地是黄金，只要努力，一定可以出人头地，千万不要学你父亲。
My mother said, "This place is full of gold; as long as you work hard, you can definitely get ahead. Don't end up like your father."

我知道，母亲为我付出太多，为了她，我大可以装作什么都不知道，昧著良心留在公司享受胜利果实。
I know my mother has sacrificed too much for me. For her sake, I could pretend I don't know anything, stay at the company against my conscience, and enjoy the fruits of victory.

在夏威夷的海滩上，骄阳似是要把我烧焦。
On the beach in Hawaii, the blazing sun seemed like it would burn me to a crisp.

我哑着嗓子问父亲，如果我有机会做奥本海默，要不要去做？
I asked my father in a hoarse voice, if I had the chance to be Oppenheimer, should I do it?

就是，我拥有某种科技的力量，但它可能导致灾难的后果。
That is, I possess some kind of technological power, but it could lead to disastrous consequences.

父亲沉默了许久。
My father was silent for a long time.

他嘶哑着嗓音在电话里说，不要问我。
He said in a hoarse voice over the phone, "Don't ask me."

你该问你的本心。
"You should ask your own heart."

有时候，你的问题，就是你的答案。
"Sometimes, your question is your answer."

DATE 2.15
DATE 2.15

我向公司提交了辞职申请。
I submitted my resignation application to the company.

曹操开始还以为是我嫌钱给得不够，便以工资翻倍、期权增加的手段挽留。
Cao Cao initially thought I was dissatisfied with the compensation, so he tried to keep me with doubled salary and increased stock options.

自诚，人可不能太贪心，这已经是我能开出的最好条件了。
Zicheng, a person shouldn't be too greedy. These are already the best terms I can offer.

他边说边喝着咖啡，有褐色水珠挂到胡子上。
He said this while drinking coffee, with brown droplets clinging to his beard.

我看到他手上那块镂空的百达斐丽，内部零件精密地转动着，神似打开的头盖骨。
I saw the open-worked Patek Philippe on his wrist, its internal components turning precisely, strikingly resembling an opened skull.

我深吸一口气，说，我已经决定了。
I took a deep breath and said, I've already decided.

他看着我，像在看一个奇怪的生物。
He looked at me, as if looking at a strange creature.

你确定？他问。
Are you sure? he asked.

我确定，我说，我没办法说服自己的良心。
I'm sure, I said, I can't convince my conscience otherwise.

你明知道这对人类而言意味着什么。
You clearly know what this means for humanity.

他笑了笑，然后将身体向后靠去，双腿一前一后抬到了桌子上。
He smiled, then leaned back, propping his legs one in front of the other on the desk.

不是每个人都有你现在的机会。
Not everyone has the opportunity you have now.

没想到，这世上还会有人对成功过敏。
I never thought there would be someone allergic to success.

我没说话。
I didn't speak.

他又说，要知道，你和公司签了保密协议，未来的两年内，你无法再在我们这个行业找到任何一家公司收留。
He continued, you should know, you signed a confidentiality agreement with the company. For the next two years, you won't be able to find any company in this industry that will take you in.

你要想清楚，你这是在自毁前程。
You need to think clearly; you're ruining your own future.

我说，曹操，我知道我们手中的力量。
I said, Cao Cao, I know the power we hold.

驾驭这种力量，我们或许会成为世界上最成功的人。
Harnessing this power, we might become the most successful people in the world.

但你不会懂得，什么叫做心外无物，什么又叫做顶天立地。
But you wouldn't understand what it means to have nothing outside the mind, or to be

of indomitable spirit.

你可以看很多遍上下五千年，但你的本质依然是阿特拉斯耸耸肩。
You can read "Five Thousand Years of China" many times, but your essence remains "Atlas Shrugged."

我以为他会听不懂我在说什么，但他的表情让我感觉他懂了。
I thought he wouldn't understand what I was saying, but his expression made me feel he understood.

一股不易察觉的恼怒蒙上他的脸颊，但又立刻被一股精明坚毅的神情覆盖住。
A barely perceptible flash of annoyance crossed his face, but was immediately covered by a shrewd, determined expression.

他轻蔑地笑了一下，而后摆了摆手，示意我出去。
He gave a contemptuous laugh, then waved his hand, gesturing for me to leave.

我站在花岗岩一块凸起的褶皱上，回头看那个地狱入口一般的矿洞，又看看自己的双手，有种失落的怅惘。
I stood on a raised fold of granite, looking back at the mine shaft that seemed like the entrance to hell, then at my own hands, feeling a sense of lost melancholy.

太阳晒在我的头顶，似是要把我晒透。
The sun beat down on my head, as if trying to burn right through me.

当一股暖流在体内升起，我意识到，我做出了正确的选择。
When a warm current rose within me, I realized I had made the right choice.

\-\-\-

Unexpectedly, my mother did not blame me.

她说，只要人心里还憋着一股劲儿，东山再起就不是什么难事。
She said, as long as there is still a fire in one's heart, making a comeback is not difficult.

两年后，我找到了合适的数据源，基于之前人体能量定律的研究，写出了生物社会学的代表作《再论人类不平等的起源》，发表在了《Science》杂志上。
Two years later, I found suitable data sources and, based on my previous research on the laws of human energy, wrote the representative work of biosociology, "A Re-examination of the Origins of Human Inequality," which was published in the journal Science.

又过了半年，我出版书籍《人类的潜能》，延续了钱学森先生与李嗣涔先生的研究路径，激起了关于社会阶层与组织协作模式的广泛讨论，我想这或许正是你们熟知我的原因。
Half a year later, I published the book "Human Potential," continuing the research path of Mr. Qian Xuesen and Mr. Li Sitsen. It sparked widespread discussion on social strata and organizational collaboration models. I think this is probably why you know of me.

如今，伴随着全球货币无纸化，老马以普及个人数字货币账户为由，联合联邦政府强制推广脑机芯片接入星链，这导致大量公民出现失智现象。
Now, with the global move toward cashless currency, Ma, under the pretext of popularizing personal digital currency accounts, has joined forces with the federal government to forcibly promote the integration of brain-computer chips with the Starlink network. This has led to a large number of citizens exhibiting signs of dementia.

如果你的身边人忽然产生了疯狂消费行为，或是毫无征兆地改变政治立场，这便有很大可能是来自这种操纵。
If people around you suddenly engage in crazy spending behavior or change their political stance without warning, it is highly likely that this is due to such manipulation.

每每想到在这一项目中我所参与的部分，我便备受煎熬。
Whenever I think about the part I played in this project, I suffer greatly.

所以，即便这些工程日志会给我带来生命威胁，我也必须将它们公之于众。
Therefore, even though these engineering logs pose a threat to my life, I must make them public.

我们身为人类，有着先天的灵魂力量，不能把一切只看作一合的物质，我们必须深入理解身为人类的使命。

As humans, we possess innate spiritual power. We cannot view everything merely as a combination of matter. We must deeply understand our mission as humans.

再次，我恳请你们原谅我在整个事件中曾扮演的角色。
Once again, I beg you to forgive the role I once played in this entire affair.

希望躲在家中的人们能避开无人机的探测，也希望失去意识的人们早日醒来。
I hope those hiding in their homes can avoid detection by drones, and I also hope those who have lost consciousness will wake up soon.

我不知道自己能否活着抵达联合国人类科技安全局，但我必须阻止这场当权者的阴谋。
I don't know if I can reach the United Nations Agency for Human Technology Safety alive, but I must stop this conspiracy of those in power.

如果不能把真相扩散出去，整个人类种族将会沉沦。
If the truth cannot be spread, the entire human race will fall.

请为我祈祷，也为人类祈祷。
Please pray for me, and also for humanity.

“达尔文时刻”是在现在还是未来？——评夏麦的《达尔文时刻之熵》
Is the "Darwin Moment" Now or in the Future? — A Review of Xia Mai's "The Entropy of Darwin's Moment"

范瑞平
Fan Ruiping

香港城市大学公共及国际事务学系哲学讲座教授
Chair Professor of Philosophy, Department of Public and International Affairs, City University of Hong Kong

主要研究领域为儒家生命伦理学与比较哲学
Main research areas: Confucian bioethics and comparative philosophy

几年以后，在往瑞士的联合国人类科技安全局狂奔的路上，华裔脑机接口专家李自诚的眼前出现了地下实验室中脑机协作情感平滑功能的首位受试者路易的脸面，那是一张在受试后呈现的冷酷精准、毫无表情、活像一个机器人的面容，就出现在那个并不遥远的脑机接口技术喜获突破的夜晚。
Years later, on the road racing towards the United Nations Agency for Human Technology Safety in Switzerland, the face of Louis, the first subject of the emotion-smoothing function in brain-computer collaboration in the underground laboratory, appeared before the eyes of Chinese brain-computer interface expert Li Zicheng—a face that, after the experiment, appeared cold, precise, expressionless, like that of a robot—on that not-so-distant night when a breakthrough in brain-computer interface technology was celebrated.

这是夏麦所著《达尔文时刻之熵》的达尔文时刻。
This is the Darwin Moment in Xia Mai's "The Entropy of Darwin's Moment."

本评之所以仿照《百年孤独》的开篇语写下上面几句话，不是想把读者带入一个充满宿命感的高科技魔幻世界里，也不是想展现饱含决定论色彩的物理主义或科学主义的人类命运。
This review borrows the opening lines of One Hundred Years of Solitude to craft the above sentences, not to transport readers into a high-tech magical world saturated with a sense of fate, nor to present a human destiny steeped in deterministic physicalism or scientism.

相反，我是想同夏麦一样提醒大家：“我们身为人类，有着先天的灵魂力量，不能把一切只看作一合的物质，我们必须深入理解身为人类的使命”（第 90 页）。
On the contrary, I intend, like Xia Mai, to remind everyone: "As humans, we possess

innate spiritual power. We cannot view everything merely as a combination of matter. We must deeply understand our mission as humans" (p. 90).

达尔文时刻是什么？
What is the Darwin Moment?

是人类发展史上的关键转变时刻，是重大进化的象征。
It is a pivotal moment of transformation in human development history, a symbol of major evolution.

达尔文时刻之熵，即进化带来的逆流。
The entropy of the Darwin Moment refers to the countercurrent brought by evolution.

脑机接口实验，加上人工智能以及大国竞争，正把我们带进这一时刻。
Brain-computer interface experiments, combined with artificial intelligence and great power competition, are precisely bringing us into this moment.

脑机接口（Brain-Computer Interface, BCI）在医疗领域的潜力无可否认。
The potential of Brain-Computer Interface (BCI) in the medical field is undeniable.

随着研究深入，对于脊髓损伤、中风后遗症、脑侧索硬化症等疾病，都有良好的应用前景，可以促进病人的运动康复，改善他们的生活质量。
As research deepens, it holds promising application prospects for conditions such as spinal cord injury, stroke sequelae, and amyotrophic lateral sclerosis, potentially promoting motor rehabilitation and improving patients' quality of life.

人们急切期待着进一步的技术进步，能让瘫痪患者站起来自主行走。
People eagerly await further technological advancements that could enable paralyzed patients to stand up and walk independently.

然而，一系列严重的道德和政治风险相伴而生，诸如隐私侵犯、身份危机、知情同意缺失、不道德的军事应用、思想监控、以及技术专制，等等。
However, a series of serious ethical and political risks accompany this, such as privacy invasion, identity crisis, lack of informed consent, unethical military applications, thought monitoring, and technological authoritarianism, among others.

但相比较哲学家和伦理学家的学术论证，夏麦对于李自诚参与的“脑控计划”的文学性描述显得更为栩栩如生：“隐藏植入情感平滑软件，可以增加受体服从性，通过培养超级大脑，可以直接将观念灌输到联网的其他大脑中，不仅可以用于消费营销，还可以用于政治选举”（第 89 页）。
But compared to the academic arguments of philosophers and ethicists, Xia Mai's literary depiction of the "Brain-Control Project" in which Li Zicheng participated is far more vivid: "Covertly implanting emotion smoothing software can increase subject compliance. By cultivating super-brains, concepts can be directly implanted

into other networked brains. This could be used not only for consumer marketing but also for political elections" (p. 89).

未来某一天，“如果你的身边人忽然产生了疯狂消费行为，或是毫无征兆地改变政治立场，这便有很大可能是来自这种操控”（第 90 页）。
Someday in the future, "if people around you suddenly engage in crazy spending behavior or change their political stance without warning, it is highly likely that this is due to such manipulation" (p. 90).

可怕吧！
Frightening, isn't it!

是危言耸听吗？
Is this alarmist?

不是。
No.

想一想人性的贪婪，你就知道人们不会坚守疾病治疗与能力增强的不同而拒绝后者。
Consider human greed, and you'll know that people will not uphold the distinction between disease treatment and ability enhancement while rejecting the latter.

谁不想活得更舒适、变得更聪明呢？
Who wouldn't want to live more comfortably and become smarter?

给你一个植入脑机接口的机会，让你不用学习就能和天才一样无所不知无所不能，你会拒绝吗？
If given the opportunity to have a brain-computer interface implanted, allowing you to know and do everything like a genius without studying, would you refuse?

但前提是你会被全面收集信息，包括你脑中最深层次的化学反应、电花闪烁和思想萌动，都会被一览无余。
But the prerequisite is that all your information would be comprehensively collected, including the deepest chemical reactions, electrical sparks, and nascent thoughts in your brain, all laid bare.

这或许还会带来某种顶层设计、统一部署和严格实施，也就是说，必须戴上李自诚设计的那款精密的颈环和发带。
This might also entail a certain kind of top-level design, unified deployment, and strict implementation—meaning you would have to wear that precise neckband and headband designed by Li Zicheng.

它们无痛无痒，而且可以做得大方漂亮，甚至可以按你的喜好样式来为你设计，

并让你从此免去任何检查的麻烦，因为你每时每刻都已处在检查之中。
They cause no pain or itch, can be made elegantly beautiful, and can even be customized to your preferred style, freeing you from the hassle of any examinations ever again because you would be under examination every moment.

这一脑机协作的安排将使全社会进入绝对的和谐状态。
This arrangement of brain-computer collaboration would bring the entire society into a state of absolute harmony.

中心可以调整脑机接口来让你“自主”疯狂消费，或让你改变政治立场，但这些都是整个社会的需要，也符合你的需要，不会让你感到任何不妥或不适，你会生活在无比快乐和高效高能之中。
The central system could adjust the BCI to make you "autonomously" engage in crazy spending or change your political stance, but these would be the needs of the whole society, also aligning with your needs, without causing you any discomfort or unease; you would live in immense happiness, efficiency, and high capability.

你有理由拒绝成就这一脑机接口系统吗？
Do you have a reason to refuse to help realize such a BCI system?

夏麦笔下的李自诚认为有。
The Li Zicheng depicted by Xia Mai believes there is.

中国有一种古老的文明传承，通过打坐修行来让意识进入止息、思想不再占据身体，不再受物质世界局限，达到意识自由。
China possesses an ancient civilizational heritage: through meditation and cultivation, one can bring consciousness to rest, thoughts no longer occupy the body, one is no longer limited by the material world, achieving freedom of consciousness.

按现代科学进行不太专业的粗略解释，或许是对齐了宇宙频率，形成脑波纠缠态，让意识身体束缚后获得了真正自由，因而可以同其他人进行即时意识沟通，不需要语言媒介。
In a non-professional, rough explanation in terms of modern science, perhaps this involves aligning with the frequency of the universe, forming an entangled state of brainwaves, allowing consciousness to attain true freedom after escaping bodily constraints, thereby enabling instantaneous communication with others without the need for linguistic media.

李自诚猜想，三星堆青铜器上没有文字，眼睛又向远方突起，可能意味着某种沟通天地的能力。
Li Zicheng speculates that the Sanxingdui bronze artifacts bear no inscriptions, yet their eyes protrude toward the distance, possibly signifying some ability to communicate with heaven and earth.

或许远古人类无需文字就可以自由沟通，而文字的发明则是“绝地天通”之后的意识与信息的凝结（第 87 页）。
Perhaps ancient humans could communicate freely without writing, and the invention of writing was a condensation of consciousness and information after the "Severance of Heaven and Earth" (p. 87).

尽管文明的发展尚未走到证实这些的地步，但这却是一种颇有想象力的猜想。
Although the development of civilization has not yet reached the point of confirming these ideas, this remains an imaginative hypothesis.

问题是，加入脑机接口之后，在 AI 的控制下，意识自由面临丧失，意识沟通就不再可能。
The problem is, after being connected to a BCI, under the control of AI, freedom of consciousness faces loss, and such conscious communication would no longer be possible.

其实，这种意识可能就是人性中永恒的部分，即人的“一点灵光”。
In fact, this kind of consciousness might be the eternal part of human nature, what might be called a "spark of spirit."

按儒家文化的观点来看，“天人合一”就是宇宙万物间存在的相互感通和共时联系，特别是“阴阳同气相动”：同声相应，同气相求（《易传：文言》）。
According to Confucian culture, "unity of heaven and humanity" refers to the mutual resonance and synchronic connections existing among all things in the universe, especially the principle that "the same vital energy moves the yin and yang together": "Like sounds respond to each other; like vital energies seek each other out" (Commentary on the Book of Changes: Commentary on the Words).

这种人类感应和意识交通不是现代科学发现的历时性因果规律，而是另一种类型的共时性联系。
This human resonance and conscious communication is not the diachronic causal law discovered by modern science, but another type of synchronic connection.

这种联系，现代科学目前仍无法给出完满的解释，但却可以以对人类精神的占据彻底弃绝它的可能性。
Modern science currently cannot provide a complete explanation for this connection, yet it could, by dominating the human spirit, utterly abandon the possibility of such connections.

李自诚的实验表明，大概因为人体机能对于植入无法耐受，而彻底破坏了这种机会，甚至把人变成路易那样完全丧失自由意识的机械性行尸走肉（第 88 页）。
Li Zicheng's experiments suggest that, probably due to the body's intolerance to implantation, such opportunities are thoroughly destroyed, even turning people into mechanical zombies like Louis, completely devoid of free consciousness (p. 88).

“伴随着全球货币无纸化，…联合联邦政府强制推广脑机芯片接入星链，这导致大量公民出现失智现象”（第 90 页）。
"With the global move toward cashless currency, ... joined forces with the federal government to forcibly promote the integration of brain-computer chips with the Starlink network. This has led to a large number of citizens exhibiting signs of dementia" (p. 90).

李自诚认为，不论有多少一时的好处，冒这样大的风险，都是违背人的良心、毁灭人的使命的。
Li Zicheng believes that regardless of the temporary benefits, taking such a huge risk goes against human conscience and destroys humanity's mission.

良心即本心，实质即意识。
Conscience is the original mind; its substance is consciousness.

“此心光明，亦复何言！”（王阳明）。
"This mind is luminous; what more is there to say!" (Wang Yangming).

我们已经进入达尔文时刻，这个时刻就是现在，不是未来，因为当前在正常人身上进行的小说所描述的那种实验，可能将所有人导向万劫不复的未来。
We have already entered the Darwin Moment. This moment is now, not the future, because the kind of experiments described in the novel, currently conducted on normal individuals, could lead everyone to an irredeemable future.

哪怕这种实验是在某个最受器重的秘密项目中，受试者都是十恶不赦的死囚犯与得到巨额补偿的“自愿”参加者，其本质上并无不同。
Even if such experiments are conducted within a highly favored secret project, with subjects being heinous death-row inmates and "voluntary" participants receiving huge compensation, it makes no essential difference.

然而，夏麦安排李自诚到联合国人类科技安全局去递交报告来阻止这个阴谋以避免整个人类的沉沦，大概是去错了地方，因为这种协调机构即使不是帮凶，也根本没有力量。
However, Xia Mai's arrangement for Li Zicheng to go to the United Nations Agency for Human Technology Safety to submit a report to stop this conspiracy and prevent the downfall of all humanity probably sends him to the wrong place, because such coordinating bodies, even if not complicit, simply lack the power.

能依靠的，其实只有人们自己：公开有关消息，增加透明度，提高认知，加强监督和管控。
What can be relied upon, in reality, is only people themselves: making relevant information public, increasing transparency, raising awareness, and strengthening oversight and control.

而且，我们必须从现在做起，因为现在，就是达尔文时刻。
Moreover, we must start from now, because now is the Darwin Moment.
